

AirHD 110 Mini Features

AirHD 110 Mini allows to stream HD video over 3G/4G LTE networks, using a multi-modem bonding technology.

It uses 6 standard USB modems, with mobile operators simcards. The video is transmitted concurrently through all modems, which significantly increases the stability and quality of the video broadcasting.

AirHD 110 Mini connected to the professional or webcam could broadcast online video straight from the streets or buildings. Video comes to your website, youtube channel or CDN.

The operator can move during a video transmission (including car). It does not need cable or WiFi Internet sources.

Продукты:	AirHD 110 Mini
Package	<ol style="list-style-type: none">1. The system unit with built-in battery2. Server software (for transmission on youtube or rtmp server)3. Control client software (installed on the phone or tablet pc)4. The cord connecting the camera (SDI or HDMI)5. Bag for mobile use
Video resolutions	1920×1080 FullHD, 1280×720 HD, 720×576 SD
Video transfer	On your website, streaming channel (Youtube, Webex), server (rtmp), CDN.
